

Sharing Worklist in EdulogNT (Terminal Server Setup only)

Each terminal server account has its own user account located in the *documents and settings* directory of your server's root drive. Because of this default file structure, each worklist you create in edulognt will not be viewed by any other user. If you desire each user to have their own worklist, then do nothing. If, however, you wish to share worklist with different users, continue with these instructions.

Procedure for modifying .ini files for worklist sharing

A. Editing the Edulognt.ini files (do not modify the Edulognt account as it will already be directed to the proper location).

- On the server locate each **c:\documents and settings\username*\windows\edulog\LIS\Edulognt.ini** file and edit line 3 to match the example below.

- [Initialization]
- ReportPath=c:\documents and settings\username\windows\edulog\REPORT\
- ListPath=d:\elt\map\LIS**
- OutputPath=D:\ELT\EXE\EMU\OUTPUT\

- Next, Edit line 4 in the **Foxdata.inf** file found in **D:\elt\exe\report** and in all **c:\documents and settings\username\windows\edulog\report** to match the example.

- \ELT\MAP\PAR\
- D:\ELT\TABLES\
- D:\ELT\SERVER\EXPORT\
- d:\elt\map\LIS**
- D:\ELT\EXE\REPORT\TABLES\

B. Relocating all .LIS and .HDR files.

- There are two files associated with each worklist; **.LIS** and **.HDR**. Using Windows Explorer, copy them from each user account to one central location as described below.

- Copy all **.lis** and **.hdr** files in **c:\documents and settings\username\windows\edulog\LIS** to **d:\elt\map\LIS**

Note: Since some users may have named a worklist the same as another user, a few worklists may get overwritten and you'll need to recreate them.

***username** is used as the example. Your username will be your account login name.
